Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 November 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Applicant has elected Species II (claims 1-12, 15 and 20-22) in response to the previous Restriction requirement. It is noted that claims 13, 14 and 16-19 have been withdrawn.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 15, 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki 4,780,067. Suzuki teaches a variable capacity rotary compressor 3, comprising: a housing 4 comprising two compression chambers 17, the two compression chambers having different capacities (depending upon the position of the eccentrics); a rotating shaft 2 rotatably provided in the two compression chambers; two eccentric units 2a, 2b respectively provided in the compression chambers so as to be fitted over the rotating shaft, the two eccentric units being operated so that one of the two eccentric units is positioned eccentrically from the rotating shaft to perform a compression operation while the other eccentric unit is positioned concentrically with the rotating shaft to perform an idle operation (col. 4 lines 37-59), according to a rotating direction of the rotating shaft; roller pistons 11, 12 fitted over each of the two eccentric units; vanes 13 installed in each of the two compression chambers so as to reciprocate in a radial direction while being in contact with an outer surface of the roller piston; wherein the vanes are biased by an elastic member 15; and a path control unit 22 to control a refrigerant suction path

Art Unit: 3746

control a refrigerant suction path so that a refrigerant is provided to an inlet port of one of the two compression chambers which performs the compression operation; the first compression chamber having a first volume and size (clearly seen in figure 2); and the second compression chamber having a second volume and size capacities (depending upon the position of the eccentrics), wherein the first and second chambers selectively perform a compression operation according to the rotation direction of the rotary shaft (col. 4 lines 37-59).

Allowable Subject Matter

3. Claims 2-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ryan P. Gillan whose telephone number is 571-272-8381. The examiner can normally be reached on 8:30 am - 5:00 pm; Monday - Friday.
